

FIREFLY Solid Aluminium Panels Colour Card

FIREFLY Solid Aluminium panels, which are highly corrosion resistant, are made from 5052 marine grade aluminium.

Additionally, the FSA panels are extremely durable, thanks to their three layers of superior PVDF coating. As such, they offer an ideal solution for a vast range of applications.

Our panels are available in a broad spectrum of colours that match all types of landscapes. Regardless of whether you require contemporary and bold colours, sophisticated and pearlescent metallics, or even subdued palettes that blend in with the environment, our panels will undoubtedly enhance the look of any building facade.
